OPTOMA PICO - THE PROJECTOR YOU CAN FIT IN YOUR POCKET

Optoma, one of the largest projector companies in the world, is proud to introduce the stunning Optoma Pico PK101 – a projector that's so small it fits easily in your pocket!

Imagine being able to show your friends and family videos from your media player or mobile phone at up to sixty inches in size. Ever wanted to show the photos on your digital camera or PDA whilst you're out and about? Well, now it's possible with this revolutionary new projector you can hold in your hand. No need to worry about connecting to the mains either; the Optoma Pico Pocket projector comes supplied with batteries to give you complete freedom on the move and what's more it's fully rechargeable, just like your mobile phone.

The latest LED technology, Optoma's projector expertise and Texas Instruments tried and trusted DLP® chip technology, (used in millions of business and home cinema projectors the world over), come together to produce astonishing image quality from such a small projector. There's no need to worry about replacing the lamp either - the Pico has a lamp-life of an astonishing twenty thousand hours: enough for more than eighteen years of life, even if you use the projector three hours a day, every single day of the year. We think once you've seen the Optoma Pico you'll agree that it sets the standard in pocket projectors.

“Portable fun for everyone”

“Create huge images on the move”
